Xi ONE Series Add On

BUSINESS PACK

BENEFIT FROM AN ALL-IN-ONE SOLUTION

The Business Pack adds a Windows PC and additional accessories to your Xi ONE series interactive display.

Adding an integrated PC into your IBT interactive display means you get an impressive all-in-one solution - no need to make space for a PC or laptop, it simply slots into the side. Install all your usual software directly onto the integrated PC.

The included floor stand makes your interactive touchscreen more flexible. Once installed, move your interactive touchscreen into any available space using the lockable castors for a truly flexible learning and meeting hub or huddle space (also great for temporary digital signage during events, conferences and open days).

The software collection gives you additional licensing for Hive helping you to make the most of your Xi ONE series interactive display.

Intel i5/i7 PC Module with Windows 10 OS

A slot-in Windows 10 integrated PC for an all-in-one, flexible solution, no need for a separate PC or laptop.

Floor Stand (MSS-6598)

Install your interactive display on the included mobile floor stand and move it into any available space for a flexible interactive learning hub.

### Wireless Keyboard & Mouse

Solid and stylish, we've included a full sized set (with a spill resistant design) for the times when you need a tactile keyboard and mouse.

Webcam with integrated Mic

Clip the webcam to the top of the touchscreen and use your Xi ONE series for video conferencing sessions. You can also use the visualiser app in Hive with the webcam.

With a built in microphone, use it in combination with the Hive screen recorder mini app to create video resources with your own voice overs.

Hive with Nexus Collaborate

The Hive digital whiteboarding software gives you ONE software for SMART and Promethean support, cloud file integration, mini apps and much more. 1 Hive licence and 5 x Hive Nexus Collaborate participant licences are included. Install the Hive licence directly onto the PC module for instant access.

BENEFIT FROM AN ALL-IN-ONE SOLUTION

The addition of an integrated PC into your interactive display means you get an impressive all-in-one solution with faster boot-up - no need to make space for a PC or laptop, it simply slots into the side.

Instant On/Off
No switching on this then that, simply turn the interactive display on and you're ready to go. Fast boot-up and instant shut-down.

Lower Power Consumption
An interactive display with integrated PC uses less energy than running a separate PC or laptop.

One Plug for Power
An interactive display with integrated PC needs just one plug for power, making it quick to set up and avoiding a tangle of wires.

Easy Installation
Simply slot in the PC module and install your operating system and software. It's as easy to maintain as a standard PC.
